“Getting patients the right antibiotics, when they need them”

EXECUTIVE SUMMARY

The Sinai Health-University Health Network Antimicrobial Stewardship Program (SH-UHN ASP) was established in 2009. The SH-UHN ASP uses a collaborative and evidence-based approach to improve the quality of antimicrobial use by getting patients the right antibiotics when they need them. The ASP follows data-driven quality improvement methodology to pursue the best possible clinical outcomes for its patients.

The SH-UHN ASP blends research, education, and clinical care to take a leadership role in antimicrobial stewardship and improving the quality of health care.

ANTIMICROBIAL CONSUMPTION AND COSTS

The ASP works with clinical teams across both Sinai Health (Bridgepoint Health and Mount Sinai Hospital (MSH)) and University Health Network (Princess Margaret Cancer Centre (PM), Toronto General Hospital (TGH), Toronto Rehabilitation Institute (TRI), and Toronto Western Hospital (TWH)).

Where possible, we show Defined Daily Doses (DDD) together with Days of Therapy (DOT). The metrics are extracted from the hospital pharmacy databases and the Provincial Critical Care Information System (CCIS). Although these two metrics are closely related, using lower or higher doses of antimicrobials will result in a corresponding change in DDD without any change in DOT (i.e. inpatients with renal dysfunction, extremes of body mass, or central nervous system infections). Table 1 summarizes antimicrobial usage and cost in the various units and services at SH and UHN.

The COVID-19 pandemic arrived in Toronto in January 2020 and began influencing hospital service delivery in February 2020, with reductions in clinical services, including elective and non-urgent surgeries. Accordingly, acute care hospitals (including SH and UHN) saw an expected reduction in clinical demand for antimicrobial therapy, which is reflected in the data presented. The SH-UHN ASP had to alter its operations to support clinical teams while optimizing physical distancing.

Additionally, members of the SH-UHN ASP played a variety of important roles in the pandemic effort, ranging from supporting the development of mission-critical IT applications and surveillance systems, to assessing for COVID-19 at UHN's assessment centres, to helping develop models for personal protective equipment supply and demand, to developing clinical antimicrobial therapy practice guidelines and other resources to support healthcare provision.

Table 1: Summary of Antimicrobial Usage (DDDs) and Cost by Hospital/Unit

Hospital/Unit	Antimicrobial Usage	Antimicrobial Cost
Mount Sinai Hospital: Medical Surgical ICU	↓	↓
Mount Sinai Hospital: Neonatal ICU	↓	↓

FISCAL YEAR 19/20 Q4 HIGHLIGHTS

Research – Published In This Quarter

Multiple research projects continue, with many important projects nearing completion and being prepared for submission to key medical journals.

Publications

The following articles were published or accepted for publication in peer-reviewed medical journals:

- Cogen JD, Kahl BC, Maples H, et al. Finding the relevance of antimicrobial stewardship for cystic fibrosis. *Journal of Cystic Fibrosis* 2020 Feb; 19(4): 511-520.
- Duncan EM, Charani E, Clarkson JE, et al. A behavioural approach to specifying interventions: what insights can be gained for the reporting and implementation of interventions to reduce antibiotic use in hospitals? *J Antimicrob Chemother* 2020 Feb; 75(5): 1338-1346.
- Hui-Chih Wu J, Langford B, Ha R, et al. Defining appropriate antibiotic prescribing in primary care: a modified Delphi panel approach. *JAMMI* 2020 Feb; [Epub].
- Jeffs L, McIsaac W, Zahradnik M, et al. Barriers and facilitators to the uptake of an antimicrobial stewardship program in primary care: A qualitative study. *PLOS ONE* 2020 Mar; 15(3): e0223822.

There are currently an additional three manuscripts that are near ready for submission.

Grants Awarded

- AHSC AFP Innovation Fund: Developing national antimicrobial prescribing guidelines. Principal Investigator: Andrew Morris. Co-investigators: Chaim Bell, Edith Blondel-Hill, Susan Fryters, Warren McIsaac, Patricia Sullivan-Taylor, Per Vandvik.
- HIV and Hepatitis C Community Action Fund (Public Health Agency of Canada): Developing Model(s) for a Pan-Canadian Antimicrobial Resistance (AMR) Network. Principal Investigator: Andrew Morris. Co-investigators: Gerry Wright, Herman Barkema, Scott Weese.

Research Studies

The following grant-funded studies are progressing according to timelines:

- Designing an Effective Outpatient Antimicrobial Stewardship Program to Reduce Unnecessary Antibiotic Use in Primary Care using a Mixed-Methods Collaborative Model. AHSC AFP Innovation Fund. Principal Investigators: Warren McIsaac, Andrew Morris.
- The Development and Testing of a Scaling Strategy for a Community-Based Primary Care Antimicrobial Stewardship Program Utilizing an Innovative University of Toronto Primary Care Testing Platform: the UTOPIAN Practice Based Research Network. Principal Investigator: Warren McIsaac. Co-investigators: Andrew Morris, Noah Ivers, Yoshiko Nakamachi. Funded by AHSC AFP Innovation Fund.
- A Multi-centre Investigation of the Management and Outcomes of Community-onset *Escherichia coli* Bacteremia. Principal Investigator: Andrew Morris. Co investigators: Michael Bonares, Sam Thrall, Das Pavani. Funded by PSI Resident Research Grant and SH DoM Resident Research Grant.

In addition to these funded projects, multiple unfunded research projects continue, led by various members of the SH-UHN ASP team. The following investigator-initiated study is progressing:

- A survey on antimicrobial stewardship content in undergraduate health professions and veterinarian curricula in Canadian and top-ranked universities worldwide. Principal Investigator: Miranda So. Co-investigators: Wayne Gold, Scott Weese, Linda Dresser, Marie Rocchi, Chaim Bell, Lianne Jeffs, Fok Han Leung, Andrew Morris.

Best Practices

Several algorithms and best practice guidelines have been developed and implemented into practice across UHN and SH. The algorithms and best practices can be found [here](#) on our ASP website. The SH-UHN ASP continually updates these practice tools to reflect the latest evidence.

Dr. Miranda So (ASP Pharmacist) and **Dr. Shahid Husain (ASP Physician)** have completed and implemented the “[Empiric Guidelines for Common Infections in Solid Organ Transplant Patients](#)”. The guidelines have undergone consultative reviews with stakeholders, content experts, and key opinion leaders. Guidelines continue to be introduced to staff and trainees in the **Multi-Organ Transplant Program** through a series of sessions with each of the transplant organ teams. Under the auspices of antimicrobial stewardship, the guidelines provide best practice recommendations to prescribers, pharmacists, and nurses on diagnostic workup, empiric therapy, and appropriate referral to specialist consultation, including Transplant Infectious Diseases.

JEDI and SABR

Throughout Wave 1 of the pandemic, a modified version of JEDI rounds was provided to our clinicians. Over its first nine years, the SH-UHN ASP employed an academic detailing model of three to five times a week. ICU staff who attended the multi-weekly ASP rounds were well-versed in appropriate antimicrobial prescribing, and there was a broad appetite for change.

To that end, the ASP has moved to (1) **JEDI (Judicious Evaluation of antimicrobial Decision-making in the ICU) rounds**. This is being led by **Dr. Linda Dresser (ASP Pharmacist)**, whereby the ASP team **audits appropriateness** of antimicrobial prescribing in the ICUs once a week. The audit results are then shared and discussed with the ICU team during a weekly meeting. The **appropriateness of antimicrobial prescribing** adjudication uses locally-developed, peer-reviewed, and published criteria for appropriateness. This initiative went live in the TGH MSICU in October 2017, TGH CVICU December 2017, TWH MSNICU March 2018, and the MSH ICU June 2018. JEDI in the CCU at TGH went live in Q2 and is the final ICU to go-live with this implementation.

The second component of our new ICU initiative is being led by **Linda Jorgoni (ASP Nurse Leader)** and is known as (2) **SABR (Stewardship at Bedside Rounds)**. This is an **innovative** way of **actively engaging nurses** in antimicrobial stewardship activities. The aim is to embed into daily bedside rounds “Infection” as a separate entity during the head-to-toe assessment. The components of “infection” include temperature, white blood cell count, antimicrobials, indication for antimicrobial use, and other relevant information that pertains to infection. This intervention is designed to change nursing practice using different behaviour change strategies (e.g. audit and feedback). We are currently collecting data to evaluate the intervention and to identify barriers to nursing engagement in antimicrobial stewardship.

These two new ICU ASP initiatives have been well received by the key stakeholders, who have been very informative in their feedback throughout the process, prior to implementation, allowing for continuous learning and improvement.

Antimicrobial Stewardship in Leukemia Program

During the early months of Wave 1 of the pandemic, twice-monthly directed antimicrobial surveys were put on pause.

Drs. So and Husain have been conducting twice-monthly directed antimicrobial prescribing surveys using an online tool and *a priori* definitions developed by Australia's [National Centre for Antimicrobial Stewardship](#) (NCAS) to assess adherence to the [High-Risk Febrile Neutropenia Guideline](#) and appropriateness of antimicrobial prescriptions. The online tool is called the [National Antimicrobial Prescribing Survey](#) (NAPS). Starting in May 2019, the format of the antimicrobial stewardship intervention was updated from the conventional, twice weekly audit-and-feedback meetings reviewing all admitted patients (which had been in place since 2010) to a new format with two parts: (1) presentation of the aggregate “dashboard” metrics from the NAPS survey and (2) focused, in -depth discussions on specific patients with unique antimicrobial needs and themes identified from the dashboard. With the new format, antimicrobial stewardship meetings now take place twice per month. The Q4 dashboard metrics are included in this report.

Provincial, National, and International Role

In April 2019, the Ontario government announced it would expand the scope of practice for certain health professionals, including pharmacists. **The SH-UHN ASP is actively working with the OCP (Ontario College of Pharmacists)** in developing regulations that would authorize pharmacists to prescribe for minor ailments. Prescribing antimicrobials for certain types of infections is included in the expanded scope of practice.

The SH-UHN ASP continues to work closely with **HealthCareCAN**, the **National Collaborating Centre for Infectious Diseases (NCCID)**, and the **Public Health Agency of Canada (PHAC)** to inform our national health leaders on Antimicrobial Stewardship (AMS) and Antimicrobial Resistance (AMR).

The SH-UHN ASP continues to play a leading role in implementing an antimicrobial survey tool across Canada. This tool, **Canadian NAPS**, has been collecting information about antibiotic prescriptions, accompanying diagnoses, and the appropriateness of the prescriptions. **The SH-UHN ASP continues to lead this initiative for Year 2**, making it available to an even larger number of hospitals across Canada in each of the provinces, with a **target of 100 acute care hospitals**. This initiative is being supported by PHAC (Public Health Agency of Canada), NCAS (National Centre for Antimicrobial Stewardship), and The Guidance Group in Australia.

Dr. Andrew Morris co-chairs with Dr. Gerry Wright (McMaster University) a Public Health Agency of Canada-funded initiative to develop a national antimicrobial resistance network. This work, slated to be completed in the winter 2020-21, is a national network to facilitate implementing the Pan-Canadian Action Plan on Antimicrobial Resistance.

The Leslie Dan Faculty of Pharmacy at the University of Toronto continues to be the only Pharmacy School in Canada to offer an elective course in Year 3 dedicated to Antimicrobial Stewardship, which is led by **Drs. Linda Dresser and Mark McIntyre**, SH-UHN ASP Pharmacists.

Drs. Shahid Husain and Miranda So are Chair and Co-Chair, respectively, of the Antimicrobial Resistance-Antimicrobial Stewardship White Paper Working Group of the American Society of Transplantation (AST). They are working with Dr. Jonathan Hand (also Co-Chair) of the Ochsner Health Centre in New Orleans, LA, USA. The Working Group consists of AST members from transplant infectious diseases and various organ transplant sub-specialties. The objective of the Working Group is to develop best practice recommendations for implementing antimicrobial stewardship program interventions in the solid organ transplant population.

New Collaboration with the Michener Institute

Throughout Wave 1 of the pandemic, the course was delivered virtually so as not to interrupt the certification process of our critical care nurses.

The Antimicrobial Stewardship Nursing Curriculum has been incorporated in the critical care certificate. **Linda Jorgoni, RN, ASP Nurse Leader**, and **Dr. Linda Dresser**, in partnership with the Michener Institute, developed the first **Canadian Nursing Curriculum addressing Antimicrobial Stewardship** concepts combined with infectious diseases management for critical care nurses. The content includes online modules, clinical placement, and in-classroom teaching. It provides nurses with foundational knowledge related to AMS and management of patients with infectious diseases. The first cohort of newly-hired critical care nurses received this new course content in October 2018. Since then, multiple cohorts of students have taken this course.

FISCAL YEAR 19/20 Q4 RESULTS

CRITICAL CARE

Mount Sinai Hospital: Medical Surgical ICU

The FY 19/20 Q4 summary includes:

- Antimicrobial consumption (using defined daily doses (DDDs) per 100 patient days) decreased (↓) by 19.7% compared to YTD last year.
- Antimicrobial costs per patient day decreased (↓) by 43.9% compared to YTD last year:
 - Antibacterial costs per patient day decreased (↓) by 20.0% compared to YTD last year.
 - Antifungal costs per patient day decreased (↓) by 55.2% compared to YTD last year.

NB: Patients transferred from Princess Margaret accounted for 12% of patient visits and 60% of the antimicrobial costs.

Mount Sinai Hospital: Medical Surgical ICU Antimicrobial Consumption and Costs Per Patient Day

To view **Appendix 1: FY 19/20 Q4 Top 5 Antimicrobials by Usage (DDDs per 100 Patient Days) and Expenditures by ICU Site**, please click [here](#).

Mount Sinai Hospital: Medical Surgical ICU Antimicrobial Consumption as Defined Daily Dose versus Antimicrobial Consumption as Days of Therapy

- Antibacterial Days of Therapy (DOT) per 100 patient days decreased (↓) by 25.2% compared to YTD last year.
- Antifungal Days of Therapy (DOT) per 100 patient days decreased (↓) by 57.9% compared to YTD last year.

ICU Multiple Organ Dysfunction Score (MODS)	4.00	4.04	4.12	4.25	4.62	4.87	4.73	4.43	3.92	3.86	4.08	4.24	4.00	4.34	4.72	4.33	4.08

Total Antimicrobial DDDs is the sum of systemic antibacterial DDDs + systemic antifungal DDDs + systemic antivirals; non-systemic antimicrobials are excluded.
Data Sources: Antimicrobial DDD and Costs (PharmNet), C difficile (Infection Control Dashboards), Other ICU Patient Care Indicators (Critical Care Information System).

Historical antimicrobial usage and cost data updated due to the discovery that selected added drug dosages (Fluconazole 400mg/200ml bag, Pip-Tazo 13.5gm vial, Daptomycin 500mg vial) were not included in the report. Data have been revised to include Fluconazole starting August 2013, Pip-Tazo January 2015, and Daptomycin, November 2015.

There was a calculation error for the ICU Readmission Rate for FY 16/17 Q3. That figure has now been corrected.

Mount Sinai Hospital: Neonatal ICU

Currently, there are no active ASP rounds in the NICU, however, we have continued to collect days of therapy (DOT), which is the standard metric for antimicrobial consumption for neonates. The FY 19/20 Q4 summary includes:

- Antimicrobial days of therapy (DOT) per 100 patient days decreased (↓) by 10.2% compared to YTD last year.
- Antimicrobial costs per patient day decreased (↓) by 7.5% compared to YTD last year.

Notes: Effective January 15, 2014, the NICU changed to a mixed-acuity model of care. Prior to this, ASP reported level 3 pharmacy data only. As of January 15, pharmacy data includes both level 2 and level 3 usage and cost. Patient days include both level 2 and 3 days; January level 2 days were determined by dividing the total days for the month by 2, since the change occurred midway through the month. Days of Therapy (DOT) was used as the metric for antimicrobial consumption, which is considered to be the standard for neonates.

Toronto General Hospital: Cardiac ICU

The FY 19/20 Q4 summary includes:

- Antimicrobial consumption (using defined daily doses (DDDs) per 100 patient days) decreased (↓) by 12.3% compared to YTD last year.
 - Antimicrobial costs per patient day decreased (↓) by 22.1% compared to YTD last year:
 - Antibacterial costs per patient day decreased (↓) by 28.4% compared to YTD last year.
 - Antifungal costs per patient day increased (↑) by 26.2% compared to YTD last year.
- NB: micafungin prophylaxis in heart transplant patients had stopped in October 2015 and was then reinstated in March of 2016.

Toronto General Hospital: Cardiac ICU Antimicrobial Consumption and Costs Per Patient Day

Toronto General Hospital: Cardiac ICU Antimicrobial Consumption as Defined Daily Dose Versus Antimicrobial Consumption as Days of Therapy

- Antibacterial Days of Therapy (DOT) per 100 patient days decreased (↓) by 9.7% compared to YTD last year.
- Antifungal Days of Therapy (DOT) per 100 patient days decreased (↓) by 43.8% compared to YTD last year.

Notes: Data beginning in Q4 13/14 data consists of MSNICU patients (including eight ICU II patients).

Total Antimicrobial DDDs is the sum of systemic antibacterial DDDs + systemic antifungal DDDs; non-systemic antimicrobials and antivirals are excluded.

Data Sources: Antimicrobial DDD and Costs (Centricity) *An error in DDD calculation for Pip-tazo was detected in Q3 2013; all historical data prior to this was rerun, resulting in minor changes to antibacterial DDDs.

There was a calculation error for the ICU Readmission Rate for FY 16/17 Q3. That figure has now been corrected.

Table 17: Yeast Species Isolated in Blood – Toronto Western Hospital: Medical, Surgical, and Neurosurgical ICU

NB: In past Quarterly Reports, if a patient had more than one culture of different organisms, it was counted as 0.5 each. Starting with the Q3 2017/18 Quarterly Report and moving forward, it will be counted as 1.

TWH MSNICU Pseudomonas Susceptibility

GENERAL INTERNAL MEDICINE

Mount Sinai Hospital: General Internal Medicine

The FY 19/20 Q4 summary includes:

- Antimicrobial consumption (using defined daily doses (DDDs) per 100 patient days) decreased (↓) by 18.1% compared to YTD last year.
 - Antimicrobial costs per patient day decreased (↓) by 22.0% compared to YTD last year:
 - Antibacterial costs per patient day decreased (↓) by 24.5% compared to YTD last year.
 - Antifungal costs per patient day increased (↑) by 10.4% compared to YTD last year.
- NB: Usage data calculated for patients admitted by admission to GIM medical service at MSH.

Total Antimicrobial DDDs is the sum of systemic antibacterial DDDs + systemic antifungal DDDs + systemic antivirals; non-systemic antimicrobials are excluded.

Data Sources: Antimicrobial DDD and Costs (PharmNet), C difficile (Infection Control Dashboards).

Historical antimicrobial usage and cost data updated due to the discovery that selected added drug dosages (Fluconazole 400mg/200ml bag, Pip-Tazo 13.5gm vial, Daptomycin 500mg vial) were not included in the report. Data have been revised to include Fluconazole starting August 2013, Pip-Tazo January 2015, and Daptomycin, November 2015.

Toronto General Hospital: General Internal Medicine

The 19/20 Q4 summary includes:

- Antimicrobial consumption (using defined daily doses (DDDs) per 100 patient days) increased (↑) by 7.6% compared to YTD last year.
 - Antimicrobial costs per patient day decreased (↓) by 12.1% compared to YTD last year:
 - Antibacterial costs per patient day increased (↑) by 7.5% compared to YTD last year.
 - Antifungal costs per patient day decreased (↓) by 42.0% compared to YTD last year.
- NB: Usage data calculated for patients admitted to primary GIM units at TGH.

Antimicrobial Prescribing Survey in Leukemia Service January to March, 2020 NAPS Dashboard Report

Compliance with High Risk Febrile Neutropenia Guideline and Directed Therapy

Appropriate use = Compliance with guidelines + Directed Therapy

Appropriateness of Antimicrobial

Hospital NAPS appropriateness definitions

		If endorsed guidelines are <u>present</u>	If endorsed guidelines are <u>absent</u>
Appropriate	1 Optimal ¹	Antimicrobial prescription follows endorsed local/ regional/ provincial guidelines <i>optimally</i> , including antimicrobial choice, dosage, route and duration ²	The antimicrobial prescription has been reviewed and endorsed by an infectious diseases clinician or a clinical microbiologist OR The prescribed antimicrobial will cover the likely causative or cultured pathogens and there is not a narrower spectrum or more appropriate antimicrobial choice, dosage, route or duration ² available
	2 Adequate	Antimicrobial prescription does not optimally follow the endorsed local/ regional/ provincial guidelines (including antimicrobial choice, dosage, route or duration ²) however, is a reasonable alternative choice for the likely causative or cultured pathogens OR For surgical prophylaxis, as above and duration ² is less than 24 hours	Antimicrobial prescription (including antimicrobial choice, dosage, route and duration ²) is not the most optimal, however, is a reasonable alternative choice for the likely causative or cultured pathogens OR For surgical prophylaxis, as above and duration ² is less than 24 hours
Inappropriate	3 Suboptimal	There may be a mild or non-life-threatening allergy mismatch OR Antimicrobial prescription (including antimicrobial choice, dosage, route and duration ²) is an unreasonable choice for the likely causative or cultured pathogens, including: <ul style="list-style-type: none"> spectrum excessively broad, unnecessary overlap in spectrum of activity, dosage excessively high or duration excessively long failure to appropriately de-escalate with microbiological results 	
	4 Inadequate	Antimicrobial prescription (including antimicrobial choice, dosage, route or duration ²) is unlikely to treat the likely causative or cultured pathogens OR The documented or presumed indication does not require any antimicrobial treatment OR There may be a severe or possibly life-threatening allergy mismatch, or the potential risk of toxicity due to drug interaction OR For surgical prophylaxis, the duration ² is greater than 24 hours (except where local guidelines endorse this)	
	5 Not assessable	The indication is not documented and unable to be determined from the notes OR The notes are not comprehensive enough to assess appropriateness OR The patient is too complex due to multiple co-morbidities, allergies or microbiology results, etc.	

¹ Taking into account acceptable changes due to the patient's weight or renal function, if this information is available

² Duration should only be assessed if the guidelines state a recommended duration and the antimicrobial has already been dispensed for longer than this, or if there is a clear planned 'end date' documented

Table 23: Daptomycin Use – Princess Margaret Cancer Centre: Leukemia Service

Table 24: Yeast Species Isolated in Blood – Princess Margaret Cancer Centre: Leukemia Service

NB: In past Quarterly Reports, if a patient had more than one culture of different organisms, it was counted as 0.5 each. Starting with the Q3 2017/18 Quarterly Report and moving forward, it will be counted as 1.

Table 25: Princess Margaret Cancer Centre: Leukemia FY 19/20 Q4 Top 5 Antimicrobials by Usage and Expenditures

Princess Margaret Cancer Centre: Allogeneic Bone Marrow Transplant

The FY 19/20 Q4 summary includes:

- Year-to-date (YTD) antimicrobial consumption in defined daily doses (DDDs) per 100 patient days decreased (↓) by 2.6% compared to last year.
- YTD antimicrobial costs per patient day decreased (↓) by 4.8% compared to last year:
 - YTD antibacterial costs per patient day increased (↑) by 15.4% compared to last year.
 - YTD antifungal costs per patient day decreased (↓) by 9.1% compared to last year.

BRIDGEPOINT HEALTH

Bridgepoint Health: Hospital-Wide

Bridgepoint Health: Hospital-Wide Top 5 ANTIBACTERIALS by Usage 2019/20 YTD

Bridgepoint Health: Hospital-Wide Top 5 ANTIBACTERIALS by Expenditures 2019/20 YTD

BEST PRACTICE GUIDELINES AND ALGORITHMS

- Drs. Husain and So have implemented the ASP MOT Common Infections Management Guidelines for Solid Organ Transplant Patients. The guidelines have undergone consultative reviews by content experts in MOT and Transplant Infectious Diseases and have been introduced to all the transplant teams.
- The ASP-Allogeneic Bone Marrow Transplant Working Group was formed to update the antimicrobial prophylaxis guideline for allogeneic bone marrow transplant recipients. It is currently being formatted for incorporation into the existing High-Risk Febrile Neutropenia Protocol. Drs. Husain and So would like to thank the members of the Working Group for their contributions.
- Clinical summaries continue to be available on the [ASP website](#) and on [mobile device web browsers](#) for a series of common and important conditions. We continuously review and update all our clinical summaries – ensuring that they reflect best practices based on the current clinical literature.
- Whiteboard animation videos continue to be available on [our program's YouTube channel](#).

EDUCATION

- As part of our General Internal Medicine (GIM) initiative, the ASP team has been providing ongoing education and support to GIM Pharmacists at both MSH and UHN. The ASP team provides education and tools to physicians and medical trainees through several means, including ASP/ID GIM case-based noon rounds and via a mobile ASP web application (<http://www.antimicrobialstewardship.com/treatment>) to provide efficient access to resources.
- Once a month the ASP team meets with all Nurse Practitioners from the Malignant Hematology program for case rounds.
- The Leslie Dan Faculty of Pharmacy at the University of Toronto is the first institution to offer an elective in Antimicrobial Stewardship in the Entry-to-Practice Doctor of Pharmacy Curriculum. Drs. Linda Dresser and Mark McIntyre are the course coordinators, with contributions from other ASP team members.
- The SH-UHN ASP continues to provide ASP rotations for residents and fellows from across the country and internationally.
- The Michener Critical Care RN Infection Module has been offered four times now, once a quarter.

MEMBERSHIPS

Public Health Agency of Canada

Dr. Andrew Morris is an invited member of EAGAR (Expert Advisory Group on Antimicrobial Resistance), chaired by the Federal Chief Medical Officer of Health, Dr. Theresa Tam. Dr. Morris Co-chairs an initiative through the Public Health Agency of Canada to develop a National AMR Network.

Association of Medical Microbiology and Infectious Diseases Canada

Dr. Andrew Morris is a physician member of AMMI Canada's Antimicrobial Stewardship and Resistance Committee. Dr. Linda Dresser is a pharmacist member of this committee.

Society for Hospital Epidemiology of America (SHEA)

Dr. Andrew Morris is Past-Chair of SHEA's Antimicrobial Stewardship and Resistance Committee.

Federal/Provincial/Territorial Pan-Canadian Antimicrobial Stewardship Task Group

Yoshiko Nakamachi is a member of the Federal/Provincial/Territorial Pan-Canadian Antimicrobial Stewardship Task Group for the development of the Pan-Canadian AMR Framework and AMR Action Plan.

Ontario College of Pharmacists

Yoshiko Nakamachi and Drs. Andrew Morris and Mark McIntyre are members of the Minor Ailments Advisory Group, which will provide recommendations that will inform the regulatory submission on expanded scope of practice for Ontario pharmacists.

STRATEGIC PLANNING

The ASP team developed the SH-UHN ASP Strategic Plan 2016-2019. Please contact Yoshiko Nakamachi (Yoshiko.Nakamachi@uhn.ca) if you would like a copy.
